HELLA UNDERCOVER HIDEAWAY

TAHOE HEADLIGHT HARNESS

HELLA Undercover Hideaway

Chevy Tahoe harness adapter

2015 – 2020 Chevy Tahoe Front Turn indicator bulb uses a special bulb socket.

The socket base has the GROUND and POWER contact already integrated.

To insert the HERO lighthouse into the headlight, the OEM socket needs to be removed.

HERO does not use this kind of power source, so we have to get the power signal from the OEM 8-pin plug.

HELLA Undercover Hideaway

Chevy Tahoe harness adapter

For a clean install, we recommend to use the Tahoe headlight harness adapter → PN: 358118371

This harness works as an connecting link between the 8-pin OE plug on the headlight and the vehicle OE harness. It has a bulb socket attached, that gets the current for the turn signal (+/-) directly from the car.

→ HERO Lighthouse gets the OE signal without cutting wires or damage of OE components.
